## 1 Marine Casualty

**1.1** In the event of a collision, grounding or other major casualty, what are the key provisions that will impact upon the liability and response of interested parties? In particular, the relevant law / conventions in force in relation to:

### (i) Collision

Whether Polish substantive law applies to a particular collision is primarily determined by Regulation (EC) No. 864/2007 on the law applicable to non-contractual obligations (in particular, article 4).

Poland is a contracting state to three important pieces of legislation regarding collisions: (1) the Convention for the Unification of Certain Rules of Law with Respect to Collisions Between Vessels (Brussels 1910); (2) the 1972 Convention on the International Regulations for Preventing Collisions at Sea (COLREGs); and (3) the Convention on Certain Rules Concerning Civil Jurisdiction in Matters of Collision (Brussels 1952).

The provisions of the 1910 Collision Convention have been largely incorporated into the Polish Maritime Code. A vessel's liability for a collision is, both under the 1910 Convention and Polish Maritime Code, based on fault; however, the Maritime Code additionally provides specific examples of what should be regarded as the fault of the vessel. It is worth noting that collisions with objects such as wrecks, buoys or dolphins are generally not regarded as collisions as far as the Maritime Code is concerned and are thus out of the scope of the application of the Code. In such cases, the Polish Civil Code usually applies, and the vessel's liability will almost always be strict (no-fault liability).

### (ii) Pollution

In terms of the liability for pollution damage, there are separate regulations that apply to: (i) oil pollution; (ii) bunker pollution; and (iii) general pollution (other than from oil and bunkers).

Liability for general pollution is, in principle, governed by the Polish Maritime Code, which makes the vessel's actual operator (rather than the registered owner) liable for the pollution resulting from the carriage of goods, the operation of the vessel, or the dumping of waste and other matter at sea. This liability is strict and generally cannot be avoided except in exactly defined cases. The liability for pollution is wide and includes damage suffered and the loss of profits, as well as the obligation to reimburse for various unavoidable costs related to the pollution.

Poland is also a contracting state to the International Convention on Civil Liability for Oil Pollution Damage (CLC) as amended by the 1992 Protocol (London), as well as the International Convention on the Establishment of an International Fund for Compensation for Oil Pollution Damage (FUND Convention), including the latest 2003 Protocol. Additionally, the International Convention on Civil Liability for Bunker Oil Pollution Damage (BUNKER, London 2001) operates in Poland. All these legal acts have been additionally incorporated into the Polish Maritime Code.

The European Union has recently undertaken key legislative reforms to strengthen marine environmental protection and maritime safety. On 15 February 2024, the European Parliament and the Council agreed to amend Directive 2005/35/EC to align with MARPOL standards and extend its scope to include sewage and waste pollution. The revised directive introduces tougher penalties for ship-source pollution and requires the public disclosure of violations to enhance transparency and enforcement.

Further steps were taken on 18 November 2024 when the Council adopted a new legislative package aimed at modernising maritime transport. It includes stricter pollution rules, enhanced port State control, updated flag State compliance standards, and improved accident investigation procedures. These measures mark significant progress in unifying EU maritime law and protecting marine waters from shipping-related harm.

Various domestic laws also apply, such as the 1995 Statute on the Prevention of Pollution from Ships, which, for example, allows the authorities the possibility of imposing fines on shipowners of up to SDR 1 million.

### (iii) Salvage / general average

The Polish Maritime Code contains a separate chapter on salvage; however, in most cases, the provisions of the 1989 International Convention on Salvage are applied, since Poland has been a contracting state to this Convention since 2006. The Code is generally in line with the Convention and contains only minor differences. Claims for salvage reward and the reimbursement of expenses are subject to a two-year limitation period from the date on which the salvage operation was finished.

There is also a separate chapter in the Code on the General Average, and the provisions therein are largely based on the York-Antwerp Rules (as drafted by the CMI). Where no contract was made regarding the adjustment of the general average, article 255 § 2 of the Code refers to "the rules commonly accepted in international trade". This

regulation is deemed to be a reference to the Rules. Under the Code, claims resulting from the general average are subject to a two-year time bar, which is interrupted when the notification of a claim is given to the general adjuster.

**(iv) Wreck removal**

At the time of writing this chapter (June 2025), Poland is not yet a contracting state to the 2007 Nairobi International Convention on the Removal of Wrecks. The Polish Maritime Code, and other acts, give the Polish maritime authorities the power to, e.g., order a wreck removal at the expense of the owner or sell the wreck and use the proceeds to recover certain costs. The owner of the wreck is under a general obligation to notify the authorities (within six months from the day of the sinking) of the planned final date by which the wreck will be removed.

**(v) Limitation of liability**

Poland is a party to the 1976 Convention on the Limitation of Liability for Maritime Claims (LLMC) as amended by the 1996 Protocol and the Resolution LEG.5(99) to that Protocol, adopted by IMO's Legal Committee. The Convention has also been incorporated into the Polish Maritime Code, which additionally regulates domestic matters; e.g., it prohibits the operation of Polish vessels that do not have a certificate of insurance confirming cover in respect of maritime claims. The Code also requires the Polish authorities to check (during a ship's inspection) whether such certificate is on board a vessel calling at a port in Poland.

**(vi) The limitation fund**

Limitation funds can be established in accordance with the provisions of the above-mentioned acts and the Polish Maritime Code. These funds comprise:

- a fund created in accordance with the LLMC;
- a fund based on the FUND Convention; and
- an additional fund created on the basis of the 2003 Protocol to the FUND Convention.

The Code provides for the exclusive jurisdiction of the District Court in Gdańsk to conduct proceedings in relation to limitation funds proceedings.

### 1.2 Which authority investigates maritime casualties in your jurisdiction?

Maritime accidents are primarily investigated by the Marine Accidents Investigation Commission (somewhat similar to the UK's Marine Accident Investigation Branch (MAIB)). In parallel, the Polish Maritime Chambers also hold jurisdiction over maritime casualty cases. However, civil and commercial claims arising in connection with the maritime casualties must be pursued in civil proceedings before the respective public courts (unless an arbitration clause has been effectively agreed).

Where loss of life, personal injury, or significant damage to the environment occurs, the investigative and prosecuting authorities can also become involved (in particular, the Police, Border Force or Public Prosecutors).

### 1.3 What are the authorities' powers of investigation / casualty response in the event of a collision, grounding or other major casualty?

The Marine Accidents Investigation Commission was created in order to fulfil the requirements of Directive 2009/18/EC concerning the principles governing the investigation of

accidents in the maritime transport sector. The Commission carries out investigations regarding marine accidents and incidents on a "no-blame" basis and has a very wide authority (including its access to evidence); however, it does not deal with the apportionment of liability.

Conversely, the Maritime Chamber often considers not only the cause of accidents, but also the possible apportionment of blame. It acts as a quasi-judicial body and issues final decisions upon the completion of proceedings (which can include evidence provided by witnesses, and the examination of log books, voyage data recorder (VDR) records, etc.).

## 2 Cargo Claims

### 2.1 What are the international conventions and national laws relevant to marine cargo claims?

Poland is a party to the Hague-Visby Rules (HVR) and has also ratified the 1979 Protocol (SDR). The 2008 UN Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea (Rotterdam Rules) was signed by Poland in 2009, but has not yet been ratified.

In addition, the Polish Maritime Code contains regulations regarding a carrier's liability (hence, also including cargo claims), which are mainly based on the provisions of the HVR.

### 2.2 What are the key principles applicable to cargo claims brought against the carrier?

Cargo claims can usually be brought by the person entitled to receive the cargo. That person can either be the charterer, the person nominated by the charterer (where no bill of lading (B/L) has been issued) or the "legitimate holder" of a B/L. According to article 144 § 3 of the Polish Maritime Code, the legitimate holder of a B/L is:

- in the case of a straight B/L – the consignee named in the B/L;
- in the case of an order B/L – the person to whom the order of the B/L has been made out, or the endorsee; or
- in the case of a bearer B/L – the bearer of the B/L.

Cargo claims are made against the carrier envisaged in the contract of carriage, or (more often) those named in the B/L. If the B/L does not indicate the carrier, article 136 § 2 of the Maritime Code provides the presumption that the ship's operator is the carrier. If it is proved that the B/L names the carrier inaccurately or falsely, the ship's operator is responsible towards the consignee of the goods for any loss or damage resulting therefrom; however, the operator will have recourse, in this respect, against the carrier. The other rules set out in the Code are also generally in line with the HVR.

It is worth noting that when a B/L is issued for a particular carriage of goods, the carrier cannot limit or contract out of the liability as defined in the Code. If, however, a B/L has been issued for cargo shipped under a charterparty, then this restriction applies from the moment when the B/L was endorsed to the third party.

### 2.3 In what circumstances may the carrier establish claims against the shipper relating to misdeclaration of cargo?

The carrier can hold the shipper liable for any loss or damage resulting from inaccuracies or errors in the documents concerning the cargo that are necessary in order to perform

the carriage, as well as for any losses resulting from a delay in providing such documents (article 123 § 2 of the Maritime Code).

More importantly, the carrier can hold the shipper liable for any loss or damage caused through an inaccurate or false declaration regarding the nature or character of the cargo. The shipper's liability is strict. If such a misdeclaration was made by a third party, which delivers the cargo in its own name but in fulfilment of the shipper's obligation to deliver the cargo, then this party can also be held liable by the carrier, but only if the misdeclaration resulted from that party's fault.

Where the B/L was issued, the Polish Maritime Code (article 132 § 2) generally incorporates the provisions of article III, rule 5 of the HVR, and hence the shipper is under the obligation to indemnify the carrier against all loss, damages and expenses arising or resulting from any inaccurate or false statements as to the quantity, volume, number, weight or marks of the cargo.

#### 2.4 How do time limits operate in relation to maritime cargo claims in your jurisdiction?

The Maritime Code provides a general two-year time bar in relation to claims under the contract of carriage. However, cargo claims against a carrier based on a B/L are subject to a one-year time bar from the date of the delivery of the goods, or the date when the goods should have been delivered.

### 3 Passenger Claims

#### 3.1 What are the key provisions applicable to the resolution of maritime passenger claims?

The key provisions applicable to passenger claims arise from the 1974 Athens Convention Relating to the Carriage of Passengers and Their Luggage by Sea (1974 Athens Convention), as well as two regulations at European level: Regulation (EC) No. 392/2009; and Regulation (EU) No. 1177/2010 (see question 3.2 below).

In the case of passenger claims at domestic level, the provisions of the Polish Maritime Code apply, in particular including its articles 172–187. Furthermore, the Polish Maritime Code regulates matters that are outside the scope of the international and European regulations (such as, for example, certain rights of carriers in relation to stowaways).

In addition, the Polish Act on Inland Navigation provides (in article 9a) a further procedure for the assertion of passenger rights in the event of failure to receive a reply to a complaint made under article 24 of Regulation (EU) No. 1177/2010, or when the passenger contests a decision on a complaint submitted under this procedure.

#### 3.2 What are the international conventions and national laws relevant to passenger claims?

Poland is a party to the 1974 Athens Convention, as amended by the 1976 Protocol. Poland has not ratified the 2002 Protocol as of yet; however, it is bound by its provisions via Regulation (EU) No. 392/2009 (see below).

At the European level, the following key regulations operate, concerning the rights and obligations relating to passengers:

- Regulation (EC) No. 392/2009 of the European Parliament and of the Council of 23 April 2009 on the liability of carriers of passengers by sea in the event of accidents. It

should be noted that since Regulation (EC) No. 392/2009 implements the text of the 2002 Athens Protocol directly into the EU Member States from 31 December 2012, the Protocol's provisions apply to the extent envisaged by the Regulation.

- Regulation (EU) No. 1177/2010 of the European Parliament and of the Council of 24 November 2010 concerning the rights of passengers when travelling by sea and inland waterways and amending Regulation (EC) No. 2006/2004.

At the domestic level, and to the extent that these matters are not regulated by Regulation (EU) No. 1177/2010, the provisions of the Polish Maritime Code apply primarily.

#### 3.3 How do time limits operate in relation to passenger claims in your jurisdiction?

The Polish Maritime Code provides a two-year time bar for claims not covered by the Athens Convention or the Regulation No. 392/2009, such as, for instance, passengers' claims resulting from delays in carriage, or claims for ticket refunds in the case of voyage cancellations.

### 4 Arrest and Security

#### 4.1 What are the options available to a party seeking to obtain security for a maritime claim against a vessel owner and the applicable procedure?

The security proceedings regarding all types of claims are generally regulated by the Polish Civil Procedure Code (CPC), which offers a wide range of security measures comprising freezing injunctions (including bank accounts), and mortgages and pledges. In particular, if a debtor owns a vessel that has been entered into the Polish register of ships (also including a vessel under construction), then they could be encumbered with a compulsory mortgage, provided the creditor holds an enforceable judgment against the owner. In most cases, however, where the vessel's owner has no assets in Poland except for their ship that is currently in Polish waters, the arrest of the vessel is the most convenient solution.

Poland is a party to the 1952 International Convention Relating to the Arrest of Sea-Going Ships (Arrest Convention), but not to the later 1999 Convention. The Arrest Convention only applies to maritime claims as listed in article 1(i). Upon the application of a claimant (subject to a court fee), the Polish court will issue a freezing injunction if it is held that: (i) the claim is likely to exist (but not yet necessarily proven beyond doubt); and (ii) it is probable that the claimant has a "legal interest" in obtaining the arrest order. The legal interest requirement means, in practice, that the claimant must convince the court that without the arrest their claim would be impossible, or at least very difficult to recover (e.g., the ship most likely constitutes the only significant asset of the debtor).

The practical annotation is that in order to have the application for the vessel arrest recognised promptly, any foreign documents need to be translated in advance. Failure to do so can cause major delays in obtaining the arrest.

The arrest of a ship can be obtained in Poland, even if the Polish courts do not have jurisdiction in the main proceedings. It should be noted, however, that the court in Poland will give the claimant no more than 14 days to commence legal proceedings (either in Poland or abroad), if they have not already been started.

#### 4.2 Is it possible for a bunker supplier (whether physical and/or contractual) to arrest a vessel for a claim relating to bunkers supplied by them to that vessel?

Such arrest of the vessel is generally possible, either under the 1952 Arrest Convention (e.g., based on article 1(1)(k) *viz.* a claim arising out of the supply of goods or materials for a ship's operation or maintenance), or under the general provisions of the CPC, which give the right to secure any kind of claim that can be pursued in court. The Arrest Convention facilitates the arrest, as it also provides for the right to arrest a vessel operated by the demise charterer.

The physical supplier may have difficulty in proving his claim against the vessel if the supplier is not a party to the contract with the vessel. In such cases, the claim would most likely be brought on a non-contractual basis (e.g., unjust enrichment). However, according to the CPC rules, the arrest procedure in its first phase is carried out on an *ex parte* basis; i.e., a shipowner would not have the chance to respond before the court makes its decision with regard to the arrest. Therefore, it is possible – on a *prima facie* basis – to convince the court as to the existence of a claim against the vessel and successfully arrest the ship.

A claim resulting from the bunker supply will usually not give rise to a maritime lien as far as Polish law is concerned, and this makes it slightly more difficult to prove the claim for the purposes of arrest. Poland is a party to the 1926 International Convention for the Unification of Certain Rules relating to Maritime Liens and Mortgages and has not signed any of the later conventions. Article 2 of the 1926 Convention provides an exhaustive list of claims giving rise to maritime liens. It should be noted that a very similar list of maritime liens is later repeated in the Polish Maritime Code in article 91. The last (fifth) category provides for a maritime lien for claims resulting from contracts entered into or acts performed by the master, acting within the scope of his authority away from the vessel's home port, where such contracts or acts are necessary for the preservation of the vessel or the continuation of its voyage. If the contract for the supply of the bunkers was entered into by the master in the above-mentioned circumstances, it may be easier for the claimant to arrest the ship in Poland (as it is justified by the possible enforcement of the lien against the vessel).

#### 4.3 Is it possible to arrest a vessel for claims arising from contracts for the sale and purchase of a ship?

Depending on the type of the specific claim arising from the contract of sale, the arrest of a ship is conceivable if the claim arises from “disputes as to the title to or ownership of any ship” as per article 1(1)(o) of the 1952 Arrest Convention.

Additionally, when the ship is not flying a flag of any of the states that are party to the 1952 Arrest Convention, the arrest can be based on the Polish domestic law. In such a case, the claimant can request an arrest, even if the claim cannot be categorised as a “maritime claim” within the definition provided for in article 1 of the Convention. In such a case, the claimant must merely demonstrate that: (i) it is likely that he has a claim against the shipowner; and (ii) the lack of security (arrest) would probably render enforcement of future judgment against the shipowner unsuccessful (in particular, if the shipowner has no other assets than the vessel in question).

#### 4.4 Where security is sought from a party other than the vessel owner (or demise charterer) for a maritime claim, including exercise of liens over cargo, what options are available?

In general, the CPC contains a wide range of security measures comprising freezing injunctions (including bank accounts), and mortgages and pledges.

In addition, article 149 of the Polish Maritime Code gives the carrier the statutory right to refuse delivery and retain possession of the cargo until the consignee covers the amounts relating to the carriage for which they are liable. The carrier will not be able to claim these amounts from the shipper/charterer once they have released the cargo to the consignee.

The Code also provides for the list of specific claims that are secured by a lien on the cargo. Claims secured with a lien on the cargo have priority over other claims, including those secured with mortgages (whether established by contract or the court's decision). However, the lien will be extinguished once the cargo has been delivered to the consignee.

#### 4.5 In relation to maritime claims, what form of security is acceptable; for example, bank guarantee, P&I letter of undertaking?

Once security has been granted by a Polish court (e.g., the vessel has been arrested), the debtor can apply for a cancellation or a change of the decision concerning the security, although this will always be subject to the court's discretion. However, the security will cease to exist (regardless of the court or creditor's view) if the debtor deposits the full amount of the security (as indicated in the motion for the security) in the bank account of the Ministry of Finance. If this is not done, the debtor can only negotiate an alternative security (bank guarantee, P&I letter of undertaking, etc.) with the claimant, in order for the claimant to agree to withdraw the motion for security. The creditor, however, does not have to consent to such an alternative security.

#### 4.6 Is it standard procedure for the court to order the provision of counter security where an arrest is granted?

Under Polish law, the court is not obliged to order the provision of counter security where an arrest is granted – such an order is subject to the court's discretion. Nevertheless, the court may make the granting of security or its maintenance contingent on the submission of a counter security, both *ex officio* and at the application of an obliged person, in accordance with article 739 of the CPC. It is worth noting that, in practice, Polish courts rarely use this – this is more of an exception than a rule.

#### 4.7 How are maritime assets preserved during a period of arrest?

According to the CPC rules, during the period of arrest, the ship *ex lege* remains in the management of the debtor. In specific cases, the court may appoint a third party as an administrator, in particular where the management by the debtor is improperly carried out in a manner likely to prejudice the interests of the creditor.

The administrator is obliged to perform all actions necessary to preserve a ship and maintain its proper condition and is also responsible for damage caused as a result of improper performance of his management duties.

#### 4.8 What is the test for wrongful arrest of a vessel? What remedies are available to a vessel owner who suffers financial or other loss as a result of a wrongful arrest of his vessel?

Under Polish law, vessel arrest is considered a type of protective measure aimed at securing both the claim and the future enforceability of a judgment or arbitral award. Thus, like other protective measures available to the claimants under the Polish Civil Procedure Code, the arrest will be considered “wrongful” if the claimant does not commence *in rem* proceedings within the deadline set by the court in the decision affirming the ship’s arrest (unless of course the parties reach a settlement after the arrest had been granted, but before the deadline for commencing legal action or arbitration has lapsed). Similarly, if the claimant proceeds with the ship’s arrest but the subsequent lawsuit will concern a smaller claim or a different claim to the one that the arrest was supposed to secure, the arrest might be lifted by virtue of law and consequently considered wrongful. Furthermore, if the *in rem* action is eventually lost by the claimant or the lawsuit is withdrawn by the claimant at some point (and no settlement regarding the consequences of the arrest is reached between the parties), the arrest can also be deemed wrongful.

In case the arrest is wrongful, article 746 § 1 of the CPC provides the defendant with the title to seek damages from the claimant. These damages can include both the actual loss as well as the loss of potential income. It should be noted that the action against the claimant is subject to a relatively short time bar (one year from the moment the claim for damages has arisen).

#### 4.9 When is it possible to apply for judicial sale of a ship and what is the procedure for judicial sale?

The enforcement proceedings for the sale of a vessel follow a detailed procedural framework, which ensures the balance of rights among creditors, debtors, and other stakeholders. In the Polish legal framework, the judicial sale of a ship is governed by specific provisions detailed in the Civil Procedure Code. Presented below is an overview of the relevant regulations and procedures:

- Initiation of enforcement – enforcement proceedings begin when a creditor files a request with the competent bailiff for execution (the one in whose district the ship is located at the time of execution commencement) at the initiation of enforcement. The request must include proof that the vessel is registered, which is crucial to proceed under the specific provisions applicable to registered ships. Execution against unregistered ships follows the rules for execution against movable property, and execution against foreign ships on Polish territory is conducted under the same provisions unless otherwise specified. The creditor must indicate the register the ship is listed in, unless this is impossible or excessively difficult.
- Seizure and custody of the vessel – immediately after sending a payment demand to the debtor, the bailiff orders the vessel to be detained and may appoint a custodian. The vessel is considered seized from the moment of its detention. The custodian’s role is to ensure a proper management and preservation of the vessel during the enforcement process.
- Notification of seizure – upon seizing the vessel, the bailiff must notify the debtor and the owner (if the owner is not the debtor). In cases involving foreign-registered

ships, the foreign registry authority is also notified, ensuring all relevant parties are aware of the enforcement actions.

- Public announcement of enforcement – the initiation of enforcement is publicly announced by posting details on the court’s notice board and the website of the National Council of Judicial Officers. This announcement can also be published in widely read newspapers or journals within the locality, enhancing the transparency and public awareness of the enforcement.
- Auction announcement – the auction of the vessel must be announced at least two weeks before the scheduled date. The announcement is posted on the court’s website, the National Council of Judicial Officers’ website, and transmitted to the relevant maritime administration authorities for display in appropriate ports. This ensures that potential bidders from various locations are informed and can participate in the auction.
- Conducting the auction – the auction is conducted under the oversight of the bailiff, where bidders can submit their offers. The highest bidder wins the auction, subject to meeting all legal and financial conditions set forth in the enforcement proceedings.
- Post-auction procedures – following a successful auction, the process for transferring ownership commences. This includes settling any outstanding claims against the vessel, paying the due amounts to the creditor, and officially registering the new ownership in the appropriate maritime registers.
- Distribution of proceeds – the proceeds from the auction are distributed according to predefined legal priorities. This involves covering the costs associated with the enforcement process and satisfying the creditor’s claims. Any remaining amount is returned to the debtor or handled as specified by law.
- Conclusion of enforcement – the enforcement is deemed concluded once all procedural steps have been completed, including the transfer of ownership and settlement of all claims. A final notification is issued by the bailiff to all parties involved, marking the end of the enforcement proceedings.

The sale of a vessel under enforcement proceedings in Poland is governed by a robust legal framework designed to ensure the effective execution of creditors’ rights while protecting the interests of all parties involved. The process is designed to be transparent, efficient, and fair, providing necessary legal safeguards and promoting confidence in maritime commerce and finance.

## 5 Evidence

#### 5.1 What steps can be taken (and when) to preserve or obtain access to evidence in relation to maritime claims including any available procedures for the preservation of physical evidence, examination of witnesses or pre-action disclosure?

According to article 310 of the CPC, evidence can be secured if there is the potential risk that obtaining the evidence later will be impossible or very difficult, or if, for any other reason, it is necessary to determine the present facts. Evidence is secured by the court. Prior to the proceedings, this can be done only upon the party’s request; however, once the proceedings have commenced, the court can also secure further evidence on its own initiative.

Where proceedings are subject to the Criminal Procedure Code (i.e., in the Maritime Chamber), the parties can also apply to the authorities in charge to collect and secure certain evidence.

**5.2 What are the general disclosure obligations in court proceedings? What are the disclosure obligations of parties to maritime disputes in court proceedings?**

Article 3 of the CPC (which applies to most commercial disputes in shipping) imposes a general obligation on the parties to the civil proceedings to act with decency and provide true information regarding the case without concealing anything. Witnesses are obliged to testify truthfully, and perjury is subject to prosecution. The same penalty applies to parties if they provide false statements while under oath.

Parties are obliged not to impede the process of obtaining evidence and must comply with court orders regarding the delivery of certain documents. Failure to do so entitles the court to decide how this behaviour should be interpreted depending on the facts of each case (but usually leading to a conclusion that is disadvantageous to the party responsible for such failure).

**5.3 How is the electronic discovery and preservation of evidence dealt with?**

Evidence in electronic form must be secured by the court, as well as all other evidence. The party is obliged to provide electronic evidence to the court in a fixed form, by means of a digital media device (for example, on a CD or a flash drive). Furthermore, the electronic document should be followed up by its hard copy version.

## 6 Procedure

**6.1 Describe the typical procedure and timescale applicable to maritime claims conducted through: i) national courts (including any specialised maritime or commercial courts); ii) arbitration (including specialist arbitral bodies); and iii) mediation / alternative dispute resolution (ADR).**

### 6.1.1 Which national courts deal with maritime claims?

Maritime claims, as well as most transport-related disputes, are recognised by the commercial divisions of the regional or district courts (depending on the amount in dispute). Typically, the proceedings start with a lawsuit being filed in the court and then served to the defendant (the latter moment constituting *lis pendens* and being decisive for preventing concurrent proceedings that start in a different court or jurisdiction). The CPC invokes a system of preclusion, meaning in practice that parties need to present evidence and statements as early as possible, otherwise the court might not take them into consideration later.

The court will often order the parties to exchange further writs before scheduling a hearing, in order to narrow down the proceedings to only the disputed issues. Moreover, the court orders preliminary hearings, during which the most important aspects of the case are introduced and the organisation of the trial is planned. At a later stage, the witnesses will be heard, and the opinion of experts will be ordered (if required). The first instance proceedings are rarely closed within three months (save for judgments by default) and can take from six

months to two years, largely depending on the complexity of each case and the involvement of the parties. Each first instance judgment can be appealed; however, second instance proceedings are usually shorter and are often concluded after the first hearing. Depending on the court of appeal, these proceedings will usually take no more than a few months.

### 6.1.2 Which specialist arbitral bodies deal with maritime disputes in your jurisdiction?

Arbitration in Poland is still uncommon in maritime cases, and arbitration clauses from the standard forms (typically referring to London arbitration) usually remain unchanged. There is, however, the International Court of Arbitration based in Gdynia, which is associated with the Polish Chamber of Maritime Commerce and predominantly deals with maritime disputes. Some commercial disputes with a maritime element are also dealt with by the Court of Arbitration at the Polish Chamber of Commerce, which holds a list of many arbitrators qualified in law outside Poland.

Arbitration proceedings, unless arranged on an *ad hoc* basis, will usually be regulated by the terms and procedures of each tribunal, and the CPC will additionally apply (regulating, *inter alia*, the procedure for appealing from the award to the court).

### 6.1.3 Which specialist ADR bodies deal with maritime mediation in your jurisdiction?

Mediation and alternative dispute resolution (ADR) have been promoted over the last few years and, presently, the courts strongly encourage parties to use mediation after the legal proceedings have been commenced. It is often the case that at an early stage in the proceedings, the judge will *ex officio* issue an order requesting the parties to try to reach a compromise through mediation within a given time. Whilst participating in the mediation is not compulsory, disputes are increasingly being resolved this way. One of the incentives of mediation is that reaching a settlement this way can entitle the claimant to the return of 100% or 75% of the court fee. Detailed regulations on mediation have been adopted into the CPC.

**6.2 What are the principal advantages of using the national courts, arbitral institutions and other ADR bodies in your jurisdiction?**

Poland offers relatively low litigation costs, with low court fees (usually 5% of the claim amount, subject to a cap of no more than approximately USD 50,000) and very reasonable attorneys' fees. Additionally, costs such as translations, commuting and other expenses are considerably lower than in most Western European jurisdictions.

Arbitral institutions tend to be composed of experienced professionals, generally well prepared and well versed in the merits of the matter. Among the most cited benefits of arbitration in Poland are its comparatively swift proceedings as well as its confidentiality.

**6.3 Highlight any notable pros and cons related to your jurisdiction that any potential party should bear in mind.**

As an EU Member State, Poland shares a great deal of common legislation with other European countries; therefore, Polish judgments are quickly enforceable in Europe and *vice versa*. Commercial courts have also improved over the last decade, since they have been dealing with increasingly

more transport-related cases, usually concerning parties from different jurisdictions.

The rather formal approach of Polish courts to procedural issues is one of the disadvantages that exists; however, it can usually be dealt with if the legal proceedings have been prepared in advance. In terms of speed, Polish courts are at Europe's average level. Vessel arrests are carried out in days rather than hours; however, this can in fact be seen by ship-owners as an advantage.

7 Foreign Judgments and Awards

7.1 Summarise the key provisions and applicable procedures affecting the recognition and enforcement of foreign judgments.

Poland has been an EU Member State since 1 May 2004; therefore, the recognition and enforcement of judgments given in other EU Member States is primarily regulated by the provisions of Regulation (EU) No. 1215/2012 of 12 December 2012 on jurisdiction and the recognition and enforcement of judgments in civil and commercial matters. Therefore, judgments given in an EU Member State (except for Denmark, which has a separate agreement with the EU) are recognised in Poland without any special procedure being required.

In the case of the recognition and enforcement of judgments from outside the EU, various international conventions and agreements apply, both bilateral (e.g., with Russia, Ukraine, Belarus, etc.) and multilateral (e.g., the 2007 Lugano Convention, which applies between EU Member States – including Poland – and Denmark, Iceland, Norway and Switzerland). Where EU or international law on the recognition/enforcement of judgments applies, the CPC will only have an ancillary application to a procedure.

In the case of judgments given in a state from outside the EU which, in addition, does not have any bilateral (or multilateral) agreement with Poland, the recognition and enforcement of such a judgment will be primarily governed by the CPC.

7.2 Summarise the key provisions and applicable procedures affecting the recognition and enforcement of arbitration awards.

Poland is a contracting state to the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958). Thus, arbitral awards given in other contracting states are recognised and enforced in Poland in accordance with the New York Convention.

Arbitral awards, as well as settlements made in arbitration proceedings in countries that are not a party to the Convention, are recognised and/or enforced in accordance with the CPC. A proper application must be filed along with mandatory attachments. As a rule of thumb, the foreign arbitral award will have to be recognised by the Polish court and once this takes place, the award can be enforced by the relevant enforcement officer/bailiff just like any Polish judgment. The court fee for the application to have a foreign (e.g., UK) arbitral award recognised/enforced in Poland is remote (currently approximately USD 90) and so is the enforcement officer's advance fee for the subsequent enforcement of the award.

The CPC provides that the recognition and/or enforcement of an award or settlement will be mandatorily refused by a Polish court if: (i) according to Polish law, such dispute cannot be recognised in arbitration proceedings; or (ii) the recognition or

enforcement of the award/settlement is contrary to the public policy of Poland. There is a list of defences provided by the CPC to prevent the enforcement of an award or a settlement.

8 Offshore Wind and Renewable Energy

8.1 What is the attitude of your jurisdiction concerning the maritime aspects of offshore wind or other renewable energy initiatives? For example, does your jurisdiction have any public funding programme for vessels used in offshore wind? Summarise any notable legislative developments.

On September 15, 2021, representatives of the Polish government and key stakeholders in the offshore wind sector signed the "Polish Offshore Wind Sector Deal", which is aimed at supporting the development of the offshore wind sector in Poland, as well as maximising local content. The Sector Deal aims to establish a permanent platform for cooperation between government authorities, local government, current and future investors, operators of offshore wind farms in Poland, supply chain representatives, research institutions, and financial and insurance institutions. Its objective is to achieve the dynamic development of the offshore wind sector in Poland, emphasising the national energy, environmental, economic and social benefits.

The signing of the Sector Deal is seen as a historic milestone for both Polish energy and the economy. Poland aims to become one of the leaders in offshore wind energy development in the Baltic Sea and Europe, leveraging the installation of 11 GWs capacity by 2040. The offshore wind sector is seen as an opportunity for technological advancement, energy security, and the creation of new, well-paying jobs. It is estimated that by 2050, Poland will be able to achieve an offshore wind farm (OWF) market potential of 28 GW, making it the largest market in the Baltic Sea. Poland's energy policy up to 2040 focuses on the development of offshore wind energy as one of its key projects. OWFs provide a stable source of electricity, and a higher power utilisation when compared to onshore wind farms and photovoltaics, as well as bringing about economic benefits by supporting domestic suppliers. Additionally, OWF energy allows for emission reductions and the achievement of EU climate goals. The first OWFs in the Polish Baltic Sea could be operational as early as 2026, and currently there are 10 projects under development with a combined capacity of 5.9 GW. The Polish support programme for offshore wind energy has been approved by the European Commission and will be implemented in two phases, including financial assistance and competitive auctions.

8.2 Do the cabotage laws of your jurisdiction impact offshore wind farm construction?

The regulations concerning maritime cabotage in Poland do not have a direct impact on the construction of wind farms. However, Poland does adhere to Council Regulation (EEC) no. 3577/92 of 7 December 1992 on the application of the principle of freedom to provide services in maritime transport within Member States (maritime cabotage), which could indirectly restrict access to Polish ports for foreign vessels providing transport services or services related to the construction and operation of wind farms. According to the regulation, in principle, only those Community shipowners whose vessels are registered and sail under the flag of a Member State have the freedom to provide maritime transport services within a Member State (maritime cabotage).

## 9 Updates and Developments

**9.1 Describe any other issues not considered above that may be worthy of note, together with any current trends or likely future developments that may be of interest.**

In light of the increasing investment in offshore windfarms, the Polish regulations concerning strict liability in shipping and transport has become a crucial aspect that should be considered in risk assessment. The well-established “knock-for-knock” liability regime, widely promoted by BIMCO in various contract forms prepared by this organisation can, on some occasions, be overridden by the provisions of Polish law

on tortious liability (which in general cannot be contracted in advance). This can often favour a claimant seeking damages in connection with a loss occurring within Polish jurisdiction.

Due to its geographical position Poland has become an important point of entry to Ukraine, which has led to a noticeable increase of cargoes being shipped to and from Poland – either via the ports in Szczecin or in Gdynia/Gdańsk, as well as through various land routes (railway, haulage (CMR)).

It is worth noting that since the COVID-19 pandemic a large number of Polish courts have regularly started using MS Teams and other software to hold hearings online *in lieu* of counsel having to personally travel to each court. This has helped speed up proceedings and reduce costs for clients. Moreover, recent legal reforms have reduced the fees for enforcing a security title, therefore minimising a claimant’s financial commitment.

**Maciej Grudziński** is a qualified solicitor specialising in shipping law, marine insurance, international trade and the carriage of goods by road (CMR). He studied maritime law at the University of Southampton (LL.M.) and has considerable knowledge of English shipping law, including the carriage of goods by sea and marine insurance.

Over the last 15 years, Maciej has furthered his experience by working for P&I correspondents and then as a claims handler for a major shipowner, dealing with both Hull & Machinery and P&I insurance. He also worked for a mid-size law firm where he was involved in many aspects of shipping, including the sale of ships, ship financing and cargo claims, etc.

Maciej regularly handles cases related to transport, and in particular, cases concerning contractual disputes (claims under charterparties, insurance claims and CMR claims), as well as claims in torts (collisions and ship sinkings, wreck removals and oil pollution). He also takes care of security and enforcement proceedings, including vessel arrests.

**Piotr Rosicki** is a solicitor who qualified in Poland, having previously spent several years abroad living and studying in both London and Rotterdam. Working in the legal profession since 2004, he provides legal advice in all matters related to maritime law (including legal assistance to Poland's leading shipowners), as well as corporate law. In both of these fields, he took an active role in many projects, including establishing the legal terms of the development and operation of offshore enterprises, advising on some of Poland's largest shipping and financing undertakings.

Piotr has wide expertise in civil contracts and agreements, and his practice includes complex lease and sale contracts, including agreements relating to marine vessels, ship financing, maritime mortgages and service contracts in all areas of business (e.g., forwarding, transport, insurance and banking), as well as agreements regarding long-term cooperation or investments between business partners.

Rosicki, Grudziński & Co. is a Polish law firm advising clients mainly on transport law, in addition to insurance and international trade as well as claim handling. Our expertise is largely focused on shipping law and international trade, as well as claims recovery, road carriage and all commercial disputes arising from trade, transport or otherwise.

Our firm provides comprehensive legal services for the international business, including traders as well as maritime and manufacturing sectors. We are also proud to maintain a highly effective litigation team which assists in legal disputes and the enforcement of foreign judgments and awards, as well as in the recovery of claims.

Our lawyers provide legal assistance within Poland, including Warsaw, Kraków, Poznań, Łódź and all the major Polish ports (Gdańsk, Gdynia,

Świnoujście and Szczecin). The firm also frequently acts outside Poland in international disputes and negotiations through a wide list of corresponding lawyers in Europe and other jurisdictions.
